The Three Shalamar Gardens Project, INDIA
This project, led by Dr. Amita Sinha (Landscape Architecture), involves leading conservation architects who seek to identify common issues and priorities for landscape heritage conservation theory and practice in South Asia. Issues addressed include conflicts between heritage preservation and modern uses, contested site histories, legislative and institutional barriers to effective conservation, and conservation as a stimulus for economic regeneration of local communities. The project focuses on cultural heritage as represented in historic gardens in Srinagar, Lahore and Delhi.
