Govardhan Hill in Braj, India: The Cultural Landscape Imagined, Enacted and Reclaimed

Landscape planning, design and management proposals were developed for conservation of the sacred Govardhan Hill in Braj, India by Prof. Amita Sinha (Landscape Architecture) and a team of graduate students in Spring 2010. The landscape is associated with the legend of god Krishna and is a site of pilgrimage. The project was a result of a week-long workshop conducted at the site followed by a semester long design workshop in the campus. Reclamation of the Hill is proposed with sustainable landscape management practices for conservation of cultural and natural heritage and development of eco-cultural tourism.
